

TELE-ED

MEETING THE CHALLENGE OF
PATIENT FLOW FROM THE ED

CHALLENGE

ED boards creating an inefficient workflow requiring multiple consultations in lieu of delayed access to an intensivist. Frustration from ED staff associated with "Boarder" issues, such as dealing with the stress of caring for critically ill patients and managing their transfer communications. Concerns with increased probability of adverse outcomes associated with delayed access to intensivist consults.

SOLUTION

Our intensivists will consult for admission and manage the care of ED Boarder patients until they are treated or downgraded, handed off to the ICU, or if necessary relocated to another hospital. Acting as a bridge between the ED & ICU. The Equum intensivists are skilled at streamlining communications that often create stress among teams.

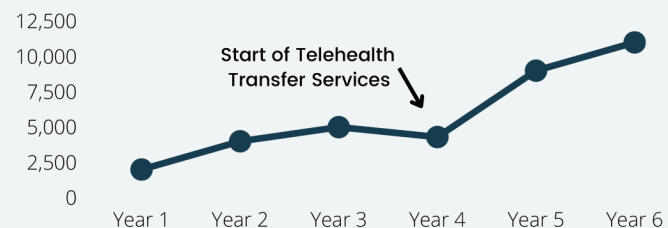

ABOUT US

Equum Medical uses telehealth to integrate clinical expertise, data analytics, innovative technologies and transformational processes to deliver the most cost-effective care to high-acuity patients when they need it, wherever they are.

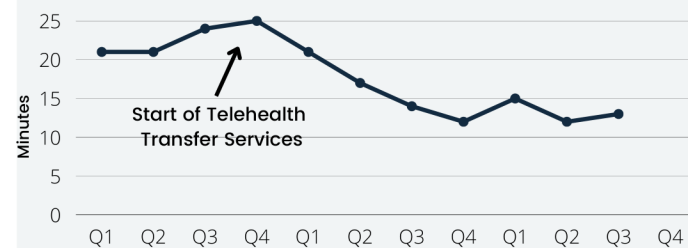

RESULTS

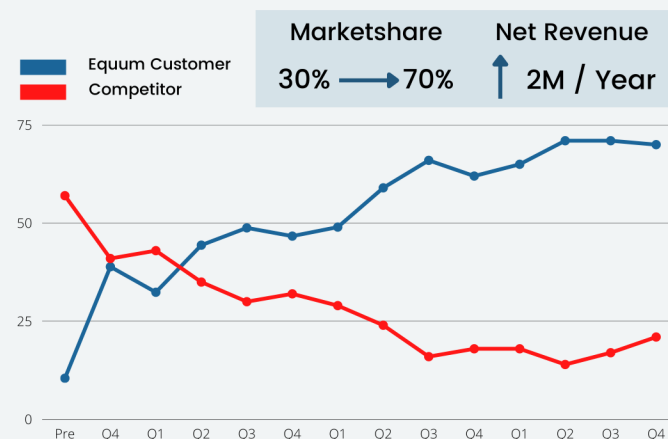

Global Transfer Volume

Time to Acceptance (Transfers)

Improved Transfer Case Volumes and Reduced System Leakage
