

PERIWATCH SURVEILLANCE™

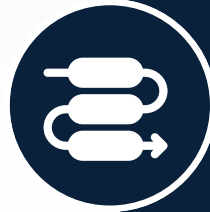

Maternal-Fetal Surveillance and Early Warning System

PeriWatch Surveillance™ is an advanced fetal surveillance and documentation system that incorporates the only automated maternal-fetal early warning system commercially available in the United States. The system's features near real-time analytical tools and scalable workflows to help labor and delivery teams improve productivity and efficiency, standardize communication, and make informed decisions.

SURVEILLANCE

DOCUMENTATION SCREENS

STREAMLINED WORKFLOW

Natural flow of documentation screens and integration with the EMR. Includes auto export feature for seamless and timely documentation.

IMMEDIATE PATIENT CAPTURE

Data gathering starts when patient is placed on a monitor, even before admission.

VIGILANCE NOTIFICATIONS

Color-coded, automated early warning notifications embedded within your surveillance system.

PERIWATCH SURVEILLANCE™

Maternal-Fetal Surveillance and Early Warning System

CLINICAL FEATURES

FHR Assessments, Annotations, and Exams

Annotate directly on the strip for singleton up to quads. Customized documentation screens to match your current workflow. Auto export fetal heart rate assessments for efficient and timely documentation.

Patient Census

Comprehensive view of all active patients, configurable columns and colors, and HIPAA compliant.

Bedside Surveillance

Provides ease of trending and navigation to documentation fields. Single and dual screen options available.

Central Surveillance

Monitor up to 30 patients on one screen, with easy configuration as the census changes.
Allows trending through each tracing independently.

Embedded Vigilance notifications *Only AI-based EFM analysis software commercially available in the U.S.¹

Color-coded maternal-fetal early warning notifications on patient census and surveillance screens.

Threshold Alerts

Patient alerts can be configured to match your facility's guidelines.

Archiving

Ready retrieval of prior patient visits including EFM tracing and documentation.

TECHNICAL FEATURES

Data Capture

Data gathering starts when monitor is connected, even prior to admission. Storage even when EMR is down.

EMR Integration

Integrates with all major EMRs, includes single sign-on capabilities, active directory, auto admit and discharge.
