

Need to find life-saving equipment to ensure it's available to providers when they need it?

Or maybe you need to locate and collect recalled assets?

Scouring the floors and visually inspecting each asset you come across to find the one you need consumes valuable biomed time, is inefficient, and still might not turn up the assets you're looking for.

ASSET LOCATION

With Pycube's Asset Location solution, finding specific assets has never been easier.

Benefits

- Dynamic software with mobile passive RFID
- Targeted searches from asset lists that you create
- Locate assets from a dynamically adjustable distance without the need for obstruction-free line-of-sight
- Live dashboard makes location information available on demand

With the unparalleled ability to look beyond what your eyes can see, **your assets can't hide from Pycube.**
