

ChronicCareIQ Transition Care Management Platform

CCIQ's TCM platform is a workflow management tool that is designed for the efficient tracking of required time-sensitive actions to be performed by providers and their clinical staff in compliance with guidelines for reimbursement for TCM services. Eligible patients may be already enrolled by the practice in CCIQ for CCM/RPM services or new patients added to CCIQ for TCM by practice staff.

Key Consideration

In a perfect world, your practice receives a patient discharge record (ADT-A03 HL7 Patient Discharge) automatically *at the time they are discharged* into your CCIQ platform. This ensures all time-sensitive actions can be scheduled and/or completed. The challenge to this perfect world is getting the hospital to agree to work with us to establish the proper HL7 interface for your practice.

Absent this willingness, there are provisions for adding patients to the TCM platform from the typical daily reports shared with PCPs.

- If it is a patient currently under your practice's care and enrolled in CCIQ for CCM/RPM monitoring, the patient's profile can be updated with required TCM information (Complexity, Discharge Date, First Call, and First Appt) which automatically includes them in the TCM dashboard
- If it a current patient *not* enrolled in CCM/RPM, their record will be in CCIQ ("unclaimed") for staff to update with the same required TCM info and they will be included in the TCM dashboard
- 3. If it is a new patient for the practice, they can be manually entered with TCM info updated for inclusion on the TCM dashboard

Workflow capabilities

- Required information for TCM billing can me added/modified from multiple links throughout the platform
- The TCM dashboard is siloed from CCIQ standard dashboard for use by a dedicated discharge clinician and avoidance of confusion
- Staff member can leverage multiple filters to quickly prioritize tasks
- Staff member can schedule a time for required calls or select "Call Now" from the Modify TCM screen (requires API interface with telephone provider)
- TCM report can be generated for each patient
- No portals or passwords to remember
- Staff able to monitor patients' responses via dashboard with color-coded status symbols
- Medical assistants can monitor by exception and notify a nurse or physician of negative trends or excursions from plan
- Early intervention reduces hospitalizations and improves outcomes
- Send and document updates to providers, family members and patient advocates to improve care coordination
- Streamline compliance and reimbursement
- Automatically captures time, prepares monthly billing report and logs compliance
