

# CASCADE™ Paper EOB Conversion

## KEY BENEFITS

### Convert paper EOBs to ANSI 835 posting files configured to auto-post to a provider's A/R system

Automated workflows simplify remittance posting. Post payments faster, reducing administrative costs with improved accuracy and efficiency. Output files are delivered within 24 hours ready to post just as any electronic remittance advice.

Although most payment remittances are received electronically, there are still some payers that send paper Explanation of Benefits (EOBs). This presents a unique challenge for healthcare providers to post these accurately and efficiently. The EOB data is used to apply each payment to the appropriate patient, perform any secondary billing, and perform any follow-up activities required for the payment.

Because these EOBs arrive in many different formats with variations in length and detail it is difficult to build automation or a workflow around the process. Using a combination of OCR, matching to the original claim and data verification technology, the EOB Conversion service converts paper EOBs into an electronic posting file configured specifically for a provider's system.

Expedite posting to your A/R system, billing software, or practice management system

Recognition and extraction of detailed patient information from the EOB and claims

Eliminate data entry and quickly post accurate EOB data configured to auto-post

Reporting and analytics for research and denial identification
