VitalCare

VitalTech for Chronic Condition Management

Empowering Patients with VitalCare.

VitalCare's easy-to-use,

Remote Patient Monitoring Solution Makes Managing Chronic Conditions Simple.

Real-Time Monitoring

Remote patient monitoring allows healthcare providers to monitor patient health in real-time. Patients with chronic conditions can be monitored continuously, and providers can receive alerts if there are any changes in the patient's condition. This enables providers to intervene early, before symptoms worsen and require hospitalization.

Personalized Care Plans

With remote patient monitoring, healthcare providers can create personalized care plans for patients with chronic conditions. These plans can be tailored to the patient's specific needs and can be adjusted based on the patient's progress. Patients can access their care plans through the VitalTech platform, which provides them with the information they need to manage their condition effectively.

Patients are empowered to manage their condition through the Engagement, Medication, & Nutrition modules.

Improved Patient Engagement

Remote patient monitoring can improve patient engagement by enabling patients to take an active role in their own care. Patients can use the VitalTech app to track their symptoms, monitor their progress, and communicate with their healthcare provider. This helps patients feel more engaged in their own care and can lead to better health outcomes.

Reduced Hospital Readmissions

Remote patient monitoring can reduce hospital readmissions by enabling healthcare providers to monitor patients more closely. Providers can identify issues early and intervene before the patient's condition worsens. This can help to prevent hospital readmissions, which are costly and can be disruptive to the patient's life.
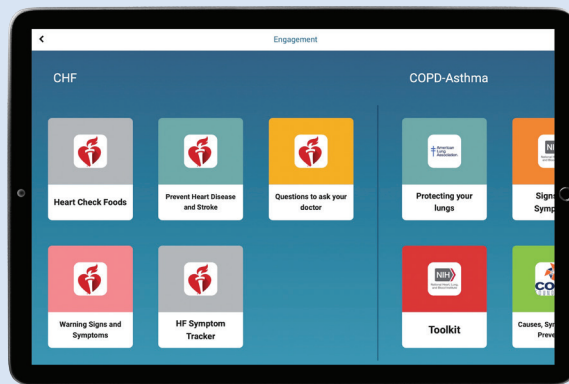

Data-Driven Decisions

Remote patient monitoring generates a wealth of data that can be used to inform care decisions. VitalTech's Insights platform provides healthcare providers with access to dashboards and analyses of all collected data. Providers can use this data to identify trends and patterns, make informed decisions, and improve patient outcomes.

Virtual Care Is VitalCare

Key Features

- Engagement Module
- Nutrition Module
- Medication Module
- Secure Messaging & Calling
- Questionnaires & Surveys

VitalCare for

- Diabetes
- CHF
- Hypertension
- COPD

And more!

VitalCare's easy-to-use, comfortable and convenient remote patient monitoring solution makes managing chronic conditions simple.

- Patients are empowered to manage their condition through the Engagement, Medication, and Nutrition modules. Educational resources are available to patients to learn more on how to manage their specific condition.

- Allows care team to perform patient assessment through completed surveys and questionnaires that patients complete at their leisure.

- Provides alerts to notify the care team when established thresholds are breached and allows for immediate follow-up action.

- Patients can message concerns or request audio and videos calls with their care team all from the VitalCare app.

- Care teams can utilize VitalTech Insights to create custom dashboards and analyses of patient trends and utilize VitalTech Care+ for automation of specific patient groups.

✔ And so much more!

Empower your patients with VitalTech's remote patient monitoring solutions.
