

Why X-Plain?

- Verify patient comprehension
- Document program completion
- Standardize education
- Control nosocomial infections

Leading healthcare institutions trust X-Plain videos to educate patients, increase patient satisfaction, and optimize staff time. X-Plain® is a library of thousands of patient education videos in several languages. Published by the Patient Education Institute, X-Plain covers diseases, procedures, and health promotion topics that span 40 medical specialties. For a list of titles, check out our [content database](#).

X-Plain videos use learning theories to impact behavioral changes. They include multimedia to simplify information, questions to engage patients, illustrations and animations, narration, and open-captioned text.

Hospitals and medical centers use X-Plain videos with their bedside TVs and other patient engagement solutions. The Patient Education Institute updates the videos on regular basis through automated webservice.

Unique to X-Plain is the ability to document completion and comprehension through X-Plain tutorials, which include the same information as the X-Plain videos, but ask questions to verify understanding, address misconceptions, and support teach-back.

The Patient Education Institute offers clinical X-Plain solutions for EMRs, patient portals, bedside patient stations, tablets, and websites. Contact us for a demo and pricing details.
