OutcomesAI

AMPLIFY CARE CAPACITY WITH

Artificial Medical Intelligence

A multi-agentic AI platform **"Glia"** that provides a suite of **Care Companions**, deeply integrated across nursing workflows, to streamline administrative tasks and provide timely clinical decision support, and **Care Navigators**, with patient conversational capabilities, that nurses can deploy for patient outreach.

Pre-Interaction

EHR Comprehension

Pre-Visit Summaries

Ambient Transcription

During Interaction

Clinical Decision Support

Dynamic Care Plans

Clinical Documentation

Post-Interaction

EHR Updates

**Care Navigation**

Cardiology

Oncology

Pulmonology

Diabetes

Orthopedics

Virtual Nursing

And more...

Acute Care • **Pre/Post-Surgical Care** • **Transitional Care** • **Ambulatory Care** • **Virtual Care**

*Spend more time caring for your patients, and let **Glia** take on the responsibilities where your nursing licensure isn't required!*

58%
time savings on pre-visit patient prep

"With Glia, I could just focus on assessing the patient"

60%
improvement on note accuracy & completeness

"Glia picked up on things I missed in my scrambled notes"

79%
time savings on clinical documentation

"Glia saves me a great deal of time on documentation"

What makes Glia uniquely different...

Nursing Focus: Glia was built by nurses, for nurses, and has passed the NCLEX and 30+ nurse certification exams

Not a Point Solution: Glia supports end-to-end nursing workflows - before, during, and after patient interactions

Enterprise Scale: Glia is configurable for multiple specialties & subspecialties and across a variety of care settings

Multi-modal AI: Glia is trained on medical data beyond language & text and is fine-tuned for customer workflows

Deep integration: Glia supports bi-directional integration and can be embedded into your EMR to drive adoption
