Verifiable

Delegated Credentialing

Build your credentialing program for efficiency and accuracy

Why are credentialing teams seeking delegation?

Delegated credentialing has become increasingly popular amongst healthcare operations teams, and it's no surprise why. Delegation has serious benefits for provider groups, health plans, and practitioners alike. But selecting the right technology can dramatically impact the success of your program.

Provider groups
see reimbursement
revenue faster

Health plans
have decreased
administrative work

Practitioners can
start delivering
care sooner

We Support Two Paths to Meet Your Needs

01 **Insource With Your Own Staff**

Best for: Ultimate control

Your staff uses the Verifiable platform to run the credentialing process—with 76% of manual tasks eliminated with automation.

02 **Outsource to Verifiable CVO**

Best for: Lean teams

Our credentialing experts use the Verifiable platform to augment your process with PSVs and packet creation turned around in 2-3 days.

→ **Consult our expert staff for audit support and best practices for NCQA compliant policies and procedures.**

What Makes Verifiable the Best Solution for Delegated Credentialing?

Easy application intake with CAQH integration available

Real-time primary source verifications

NCQA-compliant packets generated automatically

Configurable reporting and exportable rosters

## Grow Therapy is Making Mental Healthcare More Accessible Through Delegated Credentialing

1,000 providers
Onboarded per month

50+
Delegated insurance partners

"Our consistent turnaround times combined with a robust focus on NCQA standards has become a top selling point when facilitating contracts with new payer partners."

Christy Maselli
Director of Strategic Operations at Grow Therapy

Delegated Credentialing Process Requirements

For a delegation agreement between two entities to be successful, a rigorous process is required in order to uphold strong compliance and protect the safety of patients. The entity conducting the credentialing process will need to adhere to standards set forth by NCQA, CMS, and state governing bodies–all while maintaining detailed records for regular auditability.

Credentialing processes must include the review and verification of the following information:

- State licensure
- DEA Registration
- CDS Certification
- Board Certification/Specialty

- Education
- Malpractice History
- Professional Liability Claims Settlement History
- Work History

- Hospital/Facility Affiliations
- Disclosure Questions
- Attestation
- Sanctions & Exclusions
