

Remote Care Simplified.

Expand virtual care services to your population – easily and quickly.

Your Remote Patient Monitoring Specialists

Life365 makes it easy for healthcare providers to connect with patients to manage their care remotely. Care providers leverage our platform to provide virtual visits, capture biometric measurements, symptom data through health surveys, provide medication and appointment reminders, patient education, and more to achieve their goals.

Enhanced Data, More Informed Care

Life365 solutions gather biometric data and other health information from patients at home. More data points and timely information on patient health status, provides care teams with better insights to deliver more efficient care and enable faster interventions that help avoid costly admissions and readmissions.

Enhanced Care for Patients at Home

Our platform is designed to keep care teams and patients connected to enable proactive care. We empower patients with easy to use tools that build the confidence necessary to enable successful self-care management. As patients work toward their care plan goals – they'll have the support they need along the way.

Who We Help

We partner with healthcare solution / service providers to deliver a one-stop, platform for engaging growing patient populations at home. Our RPM solutions benefit segments including hospitals and health systems, home health agencies, hospice, payers, physician practices, and population health management organizations.

CPT® Codes

RPM Reimbursement Opportunities

Code 99453 • \$19.19

Products & Services

Life365 Health App

Makes tracking and reaching health goals easier.

Whether starting a weight loss program, tracking blood pressure, glucose, body temperature, or blood oxygen levels – our app is a perfect tool to record progress and better understand health status. Patients can connect health devices to their smartphone or tablet to automatically capture and record vital signs – with options to share data with family, friends, and healthcare professionals of their choosing.

Turnkey Solutions

A smart device environment designed and dedicated for remote care.

Pre-configured smart devices with cellular connectivity are ready to go for remote care management. Simple to navigate, patients only have access to applications pertinent to their care program. Our locked-down firmware ensures ease of use, strong security, and remote technical support capabilities.

Life365 Kits

Remote Care Bundled Solutions – Connect quickly and easily.

Life365 Kits give patients the tools they need to get connected quickly and easily for remote care. Each kit contains Bluetooth medical devices, with optional smart devices and cellular connectivity, to address specific chronic conditions – with kits for diabetes, cardiac care, respiratory issues, kidney care and Covid-19 solutions for assessment, preventative detection, and ongoing monitoring for recovery at home.

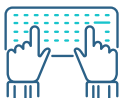

Life365 Clinical Portal

Remote Care Management – Optimize clinician workflow.

Life365's web-based care and monitoring portal provides clinicians the ability to review health data and health survey responses, set threshold and notification parameters for vitals, generate reports with graphing & trending functions, and perform HIPAA compliant virtual visits with patients.

Other Support & Services

Systems Integration

If you prefer patient data delivered directly to your existing EMR or software system, Life365's APIs enable integration with various software systems to optimize clinician workflow.

Remote Monitoring Support

If you need to augment your staff, Life365 offers clinical monitoring services and call center support through our partnerships with leading remote care service providers.

Distribution & Delivery

Life365 offers an optional inventory management and shipping service for customers who do not want to store RPM equipment on site or manage deployment and retrieval of equipment.
