CareSimple®

REMOTE **CARE** MADE **SIMPLE**

From your patient's home to your EHR in just a few steps.

CareSimple® simplifies remote patient monitoring (RPM) for virtually all patients.

Delivered directly to your patients and integrated with more than 85 EHRs, the platform provides the software, hardware, connectivity and logistics you need to implement population health-driven remote patient monitoring.

Simplifying RPM for virtually all patients.

- ✓ No app download
- ✓ No hub or WiFi
- ✓ No pairing or setup

If you have tried RPM you have likely faced many challenges: purchasing hubs, provisioning tablets, pairing peripherals, setting up patients, troubleshooting connectivity problems and spending countless hours of technical support are good reasons to be concerned about scalability.

CareSimple is all about removing these problems, taking out the technical and operational complexities that are typically associated with RPM.
