

Transforming unscheduled calls into documented care.

LogiCall is a cloud-based solution that facilitates unscheduled video calls between patients and their providers around the clock. Calls can be initiated on any smart device without downloads or software.

Finally, a solution that provides:

01 Return on Investment

Thorough documentation meets CPT billing standards for Government and Commercial Insurance carriers.

02 Risk Mitigation

Stored securely for a decade in a HIPAA-compliant cloud, audit logs offer legal recourse, especially for medical malpractice mediation involving non-compliant patients.

Recorded calls and transcripts provide detailed encounter records, aiding in identifying providers needing further training.

03 Streamlined Workflow

To reduce physician burnout, a secure virtual waiting room ensures instant connection with patients.

The seamless integration with leading EMRs/EHRs streamlines adding call data to patient records.

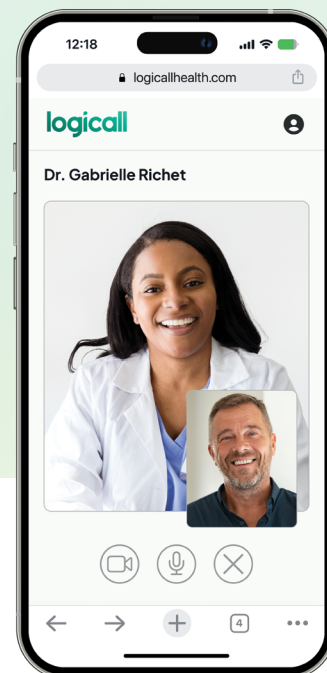

04 Improved Patient Experience

No logins or downloads are needed for the call; recording links sent via text for patients to review and share with family for treatment instructions.

Patients receive comprehensive care from their own practice.

Provider View

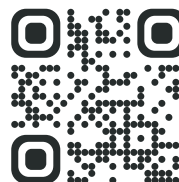

Patient View

**30% of malpractice
cases are a result of a
breakdown in provider-
patient communication.**

LogiCall's patient access to recordings
bridges the communication gap.
