

Educate, engage, and verify patient comprehension from your tablets.

Why X-Plain?

- Simplify and engage with multimedia
- Verify comprehension
- Support teach-back
- Play videos without Internet

X-Plain for Tablets educates patients at the point of care, increases patient satisfaction, and optimizes staff time. X-Plain® is a library of more than 5,272 patient education videos and tutorials. Published by the Patient Education Institute, X-Plain spans 40 medical specialties and covers diseases, procedures, and health promotion topics.

X-Plain tutorials are multimedia presentations that simplify information. They ask questions to verify patient comprehension and address misconceptions. For a list of titles, check out our [content database](#).

Implementing X-Plain for Tablets is as simple as downloading the X-Plain app and content on your Android or iPad tablet ("X-Plain" in the App store and "X-Plain Pro" in Google Play).

You can print handouts, play videos, and run tutorials to support teach-back from the X-Plain for Tablets app. The app can send and collect patient satisfaction surveys, print certificates of completion, and report usage metrics. You can play videos and tutorials without an internet connection and receive automatic updates while in a Wi-Fi zone.

The Patient Education Institute offers several clinical X-Plain solutions for EMRs, patient portals, bedside patient stations, tablets, and websites. Contact us for a demo and pricing details.
