Reminders & Task Lists

Assist patients by organizing their upcoming tasks

Medication Reminders

Avoid adverse events due to prescription conflicts

Nutritional Inputs

Keep patients on track with health goals

Communication Tools

Simple to use communication tools to remotely interact with care teams or loved ones

The Need

Staffing remains far and away the most pressing challenge for home-based care providers.¹

Agencies across the country are looking for ways to provide higher-quality care by optimizing staff capabilities through advanced remote care and monitoring tools.

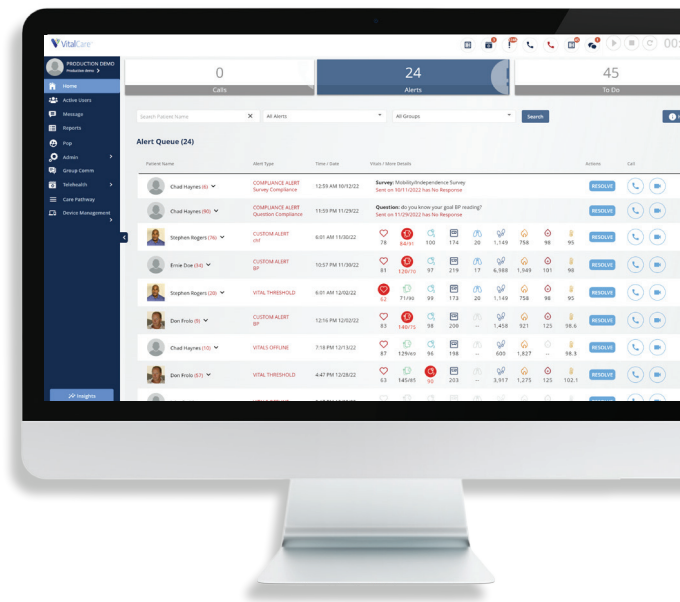

The Solution: VitalCare

VitalCare's virtual care solution helps home health agencies evolve from a sporadic, visit-only care model to a more continuous care model, where patient vitals, health information and patient reported data are shared daily, and where constant engagement between patients, their families and the nurse team are made possible.

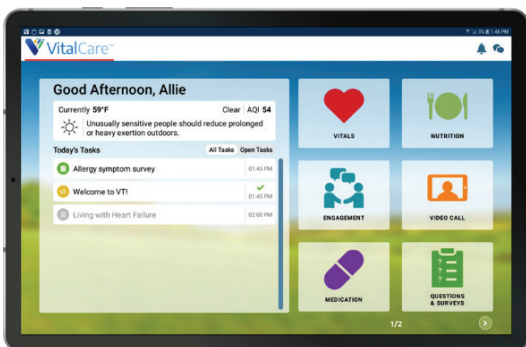

- VitalCare is an easy-to-use enterprise solution that simplifies workflows and removes the complexities of deploying virtual care.
- VitalCare's real-time patient surveys, alerts, multi-party video calling, vitals trending reports and automated clinical workflows allow case managers and nurses to better triage which patients require visits, making the nurse staff more efficient and can lower costs for unnecessary nurse visits.
- Clinicians can create and assign care plans by disease state or population, and actionable insights, encouraging proactive, patient-centered care models.

VitalCare Is The Leading Virtual Care Solution.

- Monitor your population remotely from a single central dashboard.
- Pre-configured alert thresholds for patients suffering from chronic conditions are set by care teams.
- Care teams are notified immediately following an alert and/or can view a patient's trending deterioration prior to an alert, allowing for earlier intervention to avoid an emergent situation or hospitalization.
- Reduce costly, unnecessary nurse visits with patients who can be seen virtually via VitalCare's HIPAA secure portal.

VitalCare Sample Kit

Key Benefits

- ✓ Avoid costly ER visits
- ✓ Reduce Hospital Readmissions
- ✓ Help address staffing shortages
- ✓ Optimize nurse visits by triaging clinically significant visits
- ✓ Improve patient engagement and education
- ✓ Increase patient census
- ✓ Individualize care plans for each patient
- ✓ Drive new revenue streams

Client Testimonial

Nationally we have a 16% readmission rate for patients who are under remote patient monitoring programs, and I'll shock you by saying that for us, we're around 1% right now. That's a 94% reduction in readmissions.

– David Teachey, RN/BSN, VP of Clinical Operations, South Carolina House Calls
