

98point6[®] Digital Front Door Solution

Omnichannel engagement to help expand patient access, increase provider bandwidth, streamline throughput, and create new revenue opportunities.

Elevate the Patient-Provider Relationship

The 98point6 Virtual Care Platform enables providers to meet patients where they are with the convenience of asynchronous and real-time virtual care. Integrated with SSO for a simple log-in experience, the user-friendly, embedded web interface makes it easy for providers to seamlessly connect with patients via digital front doors such as a patient portal, app, and website. 98point6 is designed to encourage patient loyalty via a white-labeled and configurable experience that reflects a health care organization's brand.

An Automated Care Guide

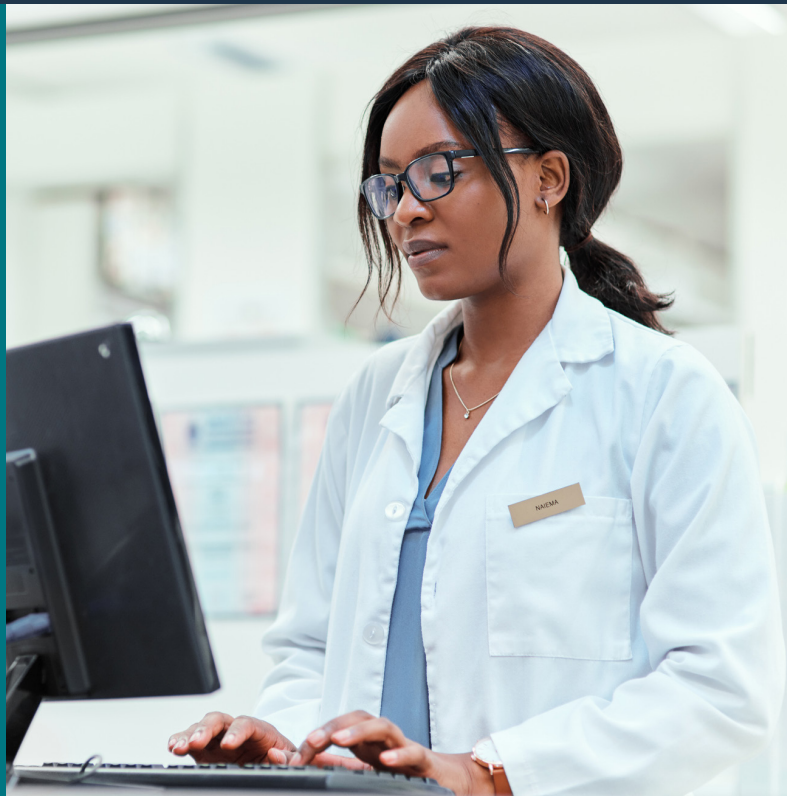

Our AI-powered digital front door solution leverages evidence-based clinical content and machine learning to automate the intake process and capture a full transcript of patient-reported symptoms and history.

Customizable to the specific workflow of the health care organization, escalations can direct the patient to real-time care, or prompt them to seek in-person care if their medical concern cannot be treated asynchronously.

A Clinician's Virtual Assistant

Our provider-first technology is designed to improve both efficiency and clinical quality by automating time-consuming tasks, allowing clinicians to focus their judgment on key decision points in the clinical encounter.

Our platform provides information and actions for the clinician to consider, but the clinician is in complete control of the visit diagnosis, and care planning.

Async and real-time

- Diagnose and treat more than 140 low-acuity, common conditions asynchronously
- Real-time care via text-based messaging, voice and video

Automation, with complete control

- Automated Patient Intake
- Decision support tools providing information and possible actions
- EMR Integration

Safe and compliant

- SOC 2 Type 1 compliant (attestation in progress)
- HIPAA compliant
- User interfaces adhere to WCAG 2.1 standards for accessibility

Easy implementation

- Out of the box self-service configuration includes care options, white-labeling, and user controls
- Price dependant custom configurations available
