

Get Well

Guided Care

Put patients at the center of their care experience

Simplify complex care navigation and scale tech-enabled value-based care

Deliver personalized care experiences

Go beyond the paper packet with over 250 clinically validated virtual care plans spanning procedural, condition-based, and generalized post-acute care available in English and 6 additional languages. Relevant, bite-sized information is delivered straight to their mobile device, making it easier for patients to engage in their care and with their care team.

Automate clinical workflows

Save care teams more time by reaching patients proactively with automated, AI-driven nudges to watch education, schedule an appointment and more. With real-time escalation and triage flowing into the EHR, clinicians can easily focus on high-need patients instead of wading through inbox messages with no clear prioritization.

Boost care plan adherence

Improve outcomes by lowering the barriers to accessing care plans. Reduce reliance on patient portal activation to communicate with patients using a mobile-first solution that doesn't require an app download. Helping patients stick to their care plan through tech-enabled touchpoints increases care team efficiency, reduces unnecessary ED utilization, improves no-show rates, and so much more.

Integrate and customize with ease

Use care plans out-of-the-box or easily customize them to align with your standards of practice. Integration with the EHR is seamless and care plans are flexible and easy to manage with minimal technical skills.

Modernize care plans

- ✓ Modern, simple, and interactive patient experience
- ✓ Mobile-first without an app
- ✓ White-labeled to enhance your health system brand
- ✓ Includes visual progress tracking, education, symptom management, and assessments

Reduce staff burden

- ✓ Over 250 flexible and easy to tailor care plans
- ✓ Automates pre- and post-acute care outreach, escalation, and triage
- ✓ Uses AI-generated nudges to keep patients on track
- ✓ Integrates data into the EHR, including Patient Reported Outcome Measures (PROMs) collection

Reduce readmission rates, improve patient satisfaction, and optimize care

Health systems across the US use Get Well to simplify complex care navigation, improve care plan adherence, and help scale value-based care by modernizing and automating care plans for millions of patients.

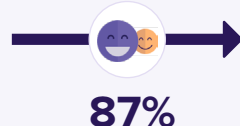

relative reduction in hospital readmissions
in the 30-day post discharge period

reduction in no-show/
cancellations

reduction in post-acute
care SNF utilization

of patients were able to avoid
unnecessary office visits or phone calls
