

Dash Intake™

Improve staff productivity and accelerate care delivery with digital patient intake solutions

Patients want a digital-first experience in their healthcare interactions - from self-service scheduling, to personalized communications and reminders, all the way through the registration experience at the point of care. However, many providers and organizations still lag in their efforts to make patient processes frictionless, causing bottlenecks that slow patient flow and have a downstream effect on care delivery.

Dash helps healthcare providers simplify and digitize the pre-registration, check in, and information collection experience to optimize the patient intake process. Configurable digital forms ensure organizations receive correct information from patients before each appointment, seamlessly integrates with your existing systems, and provides patients with the privacy and convenience of using their own mobile device.

Modernize your patient intake process to reduce paperwork, cut administrative burden, improve data accuracy, and slash wait times with an integrated solution.

Key Features	Value Add
<i>Patient eRegistration</i>	Streamline and customize the registration process by collecting digital consents, signatures, and relevant information prior to appointment.
<i>Patient Check-in</i>	Allow patients to check themselves into their appointment through a mobile-friendly experience to reduce paperwork, manual processes, and long wait times.
<i>Insurance and ID Collection</i>	Ensure accuracy and enhance the patient experience by collecting insurance information upfront through HIPAA compliant OCR scan capabilities.
<i>EHR/PM Integration</i>	Seamlessly connect patient intake information with your organization's EHR or PM system to ensure patient record accuracy and reduce staff burden.
<i>Dashboard Monitoring</i>	Easily monitor patient pre-registration and check-in status with a convenient dashboard.
