

Better healthcare begins with the right data

Harness the most accurate,
comprehensive, and contextually
relevant information to deliver a
seamless care experience.

Healthcare is fragmented and business goals more complex. Organizations must balance patient and revenue growth against their capacity and costs.

Attracting and retaining staff is as important as differentiating your organization as you compete for consumers. Creating efficiencies and streamlining complex technology, data, and processes is more essential than ever. As the largest care access platform in the country, Kyruus Health connects you with the technology and expertise to move your business forward.

Empowering care
decisions nationwide

The right data powers the right care decisions

It all starts with Kyruus Connect. The intelligent data management platform consumes, aggregates, and organizes all of your disparate data to power a comprehensive range of capabilities. By generating a single provider record that is aggregated, cleansed, and de-duplicated; you create the source of truth for all health system, provider, and location data.

Consolidate data processing through continuous ingestion from multiple sources across the organization—EHRs, credentialing systems, marketing databases, and more.

Power proprietary solutions, leverage SEO-optimized profiles, and publish into patient-facing Search and Scheduling. Connect chatbots, mobile and service team apps with the Kyruus API.

Develop data standards, governance processes, and apply business rules to help keep the data accurate overtime.

Gain patient insights and identify areas of improvement through in-app analytics and reporting.

Consumers rely on multiple sources to research care

71%
of people

looking for a new healthcare provider, service, or care location used online websites or tools

75%
of millennials

scheduled their most recent appointment online, saying it's their preferred method

All stats from Kyruus Health, Care Access Benchmark Report for Healthcare Organizations, 2023

“

With Kyruus Health we were able to leverage one platform to streamline our provider data, activate it across our website and mobile channel, and enable online scheduling seamlessly in a single experience.

VP of Digital Services

Simplify care access while streamlining internal resources

Engage healthcare consumers with a range of **Kyruus Connect** solutions that empower personalized search, appointment scheduling, cost estimates, check-in, and more.

/ SEARCH

Drive behaviors with advanced search logic and filtering, leveraging proprietary taxonomy of over 37,000 keywords in the Clinical Library.

Deliver a cohesive experience for self-serve patient access, call centers, or internal admin users.

/ SCHEDULE

Empower patients to schedule the care they need 24/7, by searching and scheduling in a single interface.

Streamline workflows with EHR integration and pre-schedule validation, to ensure patients connect to the right care.

/ CHECK-IN

Streamline front-desk activities by sending EHR-linked consent forms, collecting insurance and payment ahead of care.

Reduce front desk lines, by leveraging Arrive for self-service appointment arrival management.

KYRUUS CONNECT

/ APIS

Deliver a consistent experience, by leveraging cleansed and optimized provider data records in new ways.

Power find-a-doc, chatbots, mobile apps, service pages and more.

/ KYRUUS NETWORK

Extend your reach by leveraging the Kyruus Network of health plans and 3rd party sites.

Share provider and scheduling details to increase exposure, adoption, and conversion.

/ ANALYTICS

Identify opportunities for optimization as you view, filter, and drill down into pre-configured reports.

Track performance across multiple touch points, then print, export, or share reports broadly.

Helping industry leaders improve access to care

Learn how **Kyruus Connect** solutions can support your organization's data management, patient acquisition, and cost-reduction goals.

“

Partnering with Kyruus Health to build our single source of truth has enabled us to reduce resources tied to these updates and offers us the ability to manage and activate data at scale across our organization.
