

Engage patients with interactive, multimedia programs on your patient portal and provide up-to-date text from your EMR.

## Why X-Plain?

- Support meaningful use
- Support teach-back
- Standardize education
- Assist with informed consent

X-Plain® is a library of 16,498 patient education videos, tutorials, handouts, and text published by the Patient Education Institute. The X-Plain library spans 40 medical specialties and covers diseases, procedures, discharge instructions, and health promotion topics. It helps healthcare organizations meet regulatory standards such as informed consent, Joint Commission, and meaningful use.

X-Plain integrates with leading EMRs and patient portals using a variety of standard techniques. All content includes extensive metadata (ICD-10-CM & ICD-10-PCS coding, MeSH coding, synonyms, and keywords) used to prescribe the right topic for each patient. For a list of titles, check out our [content database](#).

Healthcare providers can print illustrated handouts or send a text or email so patients can review their education at home. Providers can also push a video or interactive tutorial to the patient portal. Interactive tutorials are multimedia presentations that ask questions to verify patient comprehension and support teach-back.

A monthly subscription allows access to all X-Plain content, plus updates, usage reports, and a quarterly best-practice newsletter.

The Patient Education Institute offers several clinical X-Plain solutions for EMRs, patient portals, bedside patient stations, tablets, and websites. Contact us for a demo and pricing details.
