

Delivering Integrated Care at Scale With Technology

Physical and behavioral health are closely linked, but implementing integrated care can be challenging. NeuroFlow simplifies integration with a high-tech and high-touch solution that supports your programs and clinical workflows.

Why Implement Integrated Care?

30%

of people with chronic conditions also suffer from mental illness

3x

increase in costs for patients with chronic disease and unaddressed mental illness

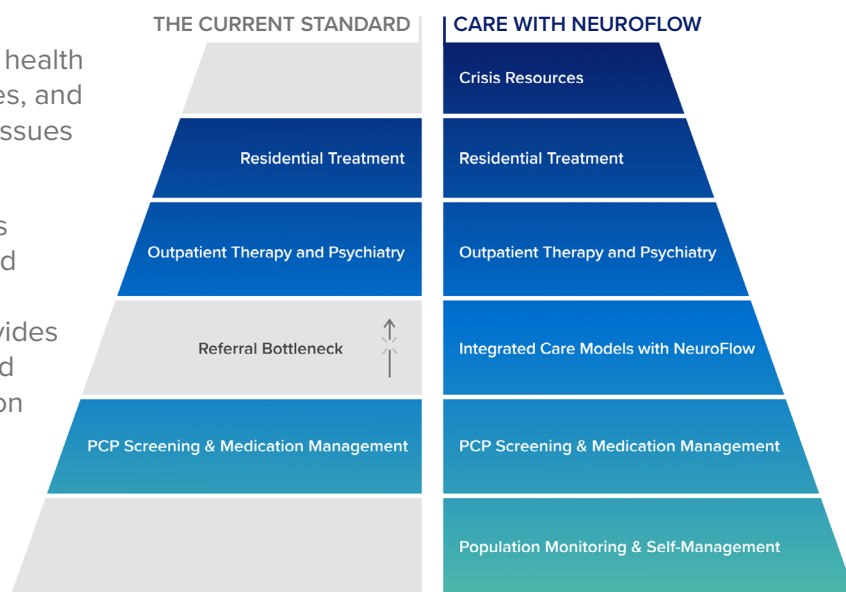

55%

increase in ED utilization for BH conditions such as anxiety, depression, or stress reactions

How NeuroFlow Supports Integrated Care

The overwhelming demand for behavioral health services strains providers' limited resources, and many PCPs are left to manage escalating issues on their own.

NeuroFlow alleviates resource bottlenecks by providing the foundation providers need to successfully execute integrated care. NeuroFlow's best-in-class technology provides the sustainable infrastructure for integrated behavioral health, helping your organization deliver care at scale. Our technology enhances your organization's ability to provide universal screening, digital self-management tools, and an ongoing risk-stratified view of patient populations.

Empowering Providers to Deliver Integrated Behavioral Health With Technology

NeuroFlow Provides a Configurable Platform And Clinical Expertise to Integrate Seamlessly Into Your Existing Workflows And Programs

Interoperability with your EHR

Clinical workflow consultation and training

Financial sustainability expertise

High-touch implementation and ongoing partnership

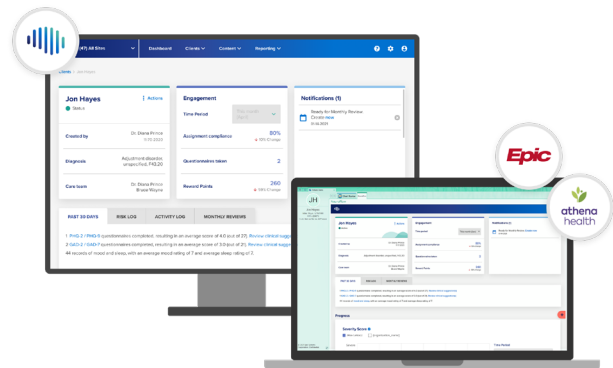

Customized reporting for your needs

Staffing for high risk interventions

Simplify Integration

NeuroFlow integrates directly into EHR and care management tools, like [athenahealth](#) and [Epic](#), to sync seamlessly with existing workflows. These integrations support a constant feedback loop, ensuring the latest patient data appears in the platforms providers are already using.

Increase Identification

Pain & Spine Specialists' BHCMS filled caseloads within one month of launching NeuroFlow.

Improve Efficiency

Reduced estimated time to response by 12% for patients with depression.

Lower Utilization

Jefferson Health lowered ED utilization 34% using NeuroFlow.
