98point6®

Asynchronous Virtual Care

The 98point6 Async Solution leverages evidence-based clinical content, machine learning, and automation to enable providers to diagnose and treat more than 140 low-acuity, common conditions in less time.

Give patients the convenience of virtual care whenever and wherever they wish.

White-labeled and integrated with SSO, the user-friendly, embedded web interface offers a seamless experience between patients and providers via existing digital front doors (patient portal, app, website).

## Reduce the Administrative Burden

Patient Intake

Our patient intake interface automatically captures a full transcript of patient-reported symptoms and history, allowing clinicians to focus on patients, not paperwork.

Async encounters are customizable to the specific workflow of the customer, with escalations directing the patient to real-time care, or prompting them to seek in-person care if their medical concern cannot be treated asynchronously.

Decision Support Tools

Our provider-first technology is designed to improve both efficiency and clinical quality by automating time-consuming tasks, allowing clinicians to focus their judgment on key decision points in the clinical encounter. Our AI-powered platform provides information and actions for the clinician to consider, but the clinician is in complete control of the visit diagnosis, and care planning.

Data Integration

Data integration is cornerstone to the 98point6 platform. EMR data can be automatically pulled into the platform for display in the clinician console, and once the visit is complete, data is automatically sent to the EMR to be recorded in the patient's medical record. Our standards-based integration supports Epic and Cerner, as well as other EMRs.

Async Solution Features

- Diagnose and treat more than 140 low-acuity, common conditions

- SOC 2 Type 1 compliant and HIPAA compliant

- User interfaces adhere to WCAG 2.1 standards for accessibility

- EMR Integration

- Out of the box self-service configuration includes care options, white-labeling, and user controls

- Price dependant custom configurations available

The Async Solution is a part of the **98point6 Virtual Care platform** which also includes real-time text, voice and video capabilities
