Not Recorded

OTHER INFO

Present Illness Full Medical Name:
Viral illness

Complete Treatment Procedure Performed:
Temperature check, prescription of painkillers

Chief Complaint:
Headache, chest pain, sneezing

Present Illness History:
3 days

Physical Examination:
Temperature check

Visit Summary

- The patient reported chest pain and frequent headaches for the past three days. They had been taking paracetamol for the headaches, but it didn't help much. The patient also had a runny nose and sneezing. The doctor took the patient's temperature and found it to be slightly elevated. The doctor diagnosed the patient with a virus and prescribed stronger painkillers for the headaches. The doctor also advised the patient to rest for two or three days and to come back if they were not feeling better after three days for blood tests.

SOAP Notes

Assessment: **Viral infection.**

Objective: **Patient's temperature is slightly elevated. No other significant findings.**

Subjective: **Patient has been feeling unwell for the past three days. Symptoms include chest pain, headaches, and sneezing. Patient has been taking paracetamol for the headaches but it has not helped much.**

Plan: **Prescription for stronger painkillers to be taken every 4 hours. If symptoms persist after three days, patient to return for blood tests.**
