

Integrations: Optimize your EMR with Fabric.

The EHR is the center of your operation, and we understand the importance of that investment. Optimize your workflows with Fabric's expansive integration suite that includes HL7, FHIR, and robust APIs.

Integrate

Use our expansive integration stack to support your existing workflows, reducing duplicative tasks and prioritizing efficiency.

Activate

Leverage patient-supplied data to ensure providers have access to pertinent information, enabling them to deliver superior care.

Seamless experiences

Offer consumer-grade experiences to patients while keeping providers in their native EMR.

Discrete data mapping

Fabric APIs and interfaces provide maximum flexibility to map actionable data back to the EMR.

Electronic Medical Record

- Med/Surg History
- Allergies
- Reconcile Activity
- Home Medications
- Glucose
- Tetanus/COVID-19**

Click on the arrow to view prefilled information from Fabric

Tetanus/COVID-19

+ New Reading

ED from 1/3/2023 in PAH Emergency Department

1667

Last Tetanus: Less than 5 years (reported by patient via the Fabric questionnaire)

Have you received any COVID-19 vaccines?: Yes (reported by patient via the Fabric questionnaire)

Enable efficiency & increase revenue

Augment native workflows and support providers with streamlined solutions that drive revenue.

Optimize discharge & patient responses

Reduce time spent discharging low-risk cases and enable better care for patients who need it.

More efficient than standard virtual or in-person care

2-10x

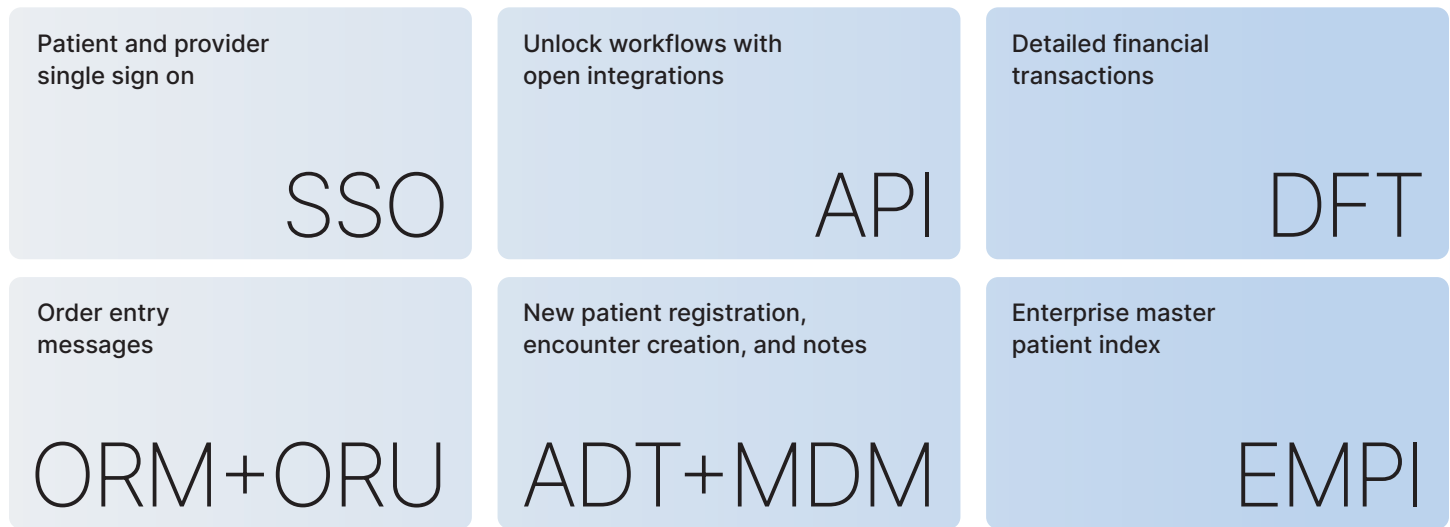

Implementation and go-live for most integrations

60-day

Faster roomed-to-discharge times

~20%

Drive results with deep integrations

Integration workflow	Benefit
Visit Summary Notes	Real-time delivery to EMR, discrete medication data to EMR, no manual steps to upload summaries or document visits in two places.
Patient Registration	Create records for new patients within your EMR system. Avoid manual patient creations and duplication by integration with enterprise master patient index searches.
Billing	Improve your overall ROI on telehealth encounters by maximizing reimbursement and automating manual work.
Scheduling	Keep schedules in one place and avoid duplicate scheduling.
Clinician SSO	Launching directly from the EMR removes the need for multiple account credentials and creates a seamless experience between in-clinic visits and virtual care.
Patient SSO	Sync data from the EMR to improve clinical quality and increase traffic to your Virtual Care Suite with seamless integration in the patient portal or your health system app.

"The new Fabric combined offering aligns with our organizational priority to consolidate point solutions and create operational efficiencies while expanding access to care for our patients."

– Jennifer Junis, SVP Digital Health-OSF OnCall
