ANDOR®

Virtual Community Collaboration

ThinkAndor® - Your indispensable clinical concierge for Virtual Community Collaboration & ADT Compliance.

ThinkAndor® assists healthcare workers as they collaborate and allows for easy interactions with their peers and community physicians.

Virtual community collaboration and ADT compliance are easy with ThinkAndor.

Andor Health guarantees 100% compliance with the Centers for Medicare & Medicaid Services' ADT notification rules and Florida House Bill 843.

- Notify PCPs of ADT events with real-time & continuous messaging
- Automate manual and fax processes
- Full configuration of workflows and patient event notifications
- Collaborate with community physicians across care settings and disparate EMR systems
- Keep Conditions of Participation for Medicare

What does the ruling require?

The Centers for Medicare & Medicaid Services (CMS) modified the Conditions of Participation (CoPs) requiring hospitals, including psychiatric hospitals and critical access hospitals, to adopt modern enabling technologies. This, in turn, allows hospital to share data from major patient events such as admission, discharge, and transfer with community providers and post-acute care teams. To maintain Medicare eligibility, the CMS rule states that providers must comply with the new rule.

ThinkAndor

ThinkAndor can be leveraged by all care team participants via a secure, HIPAA-compliant framework that streamlines workflow and enables real-time care collaboration.
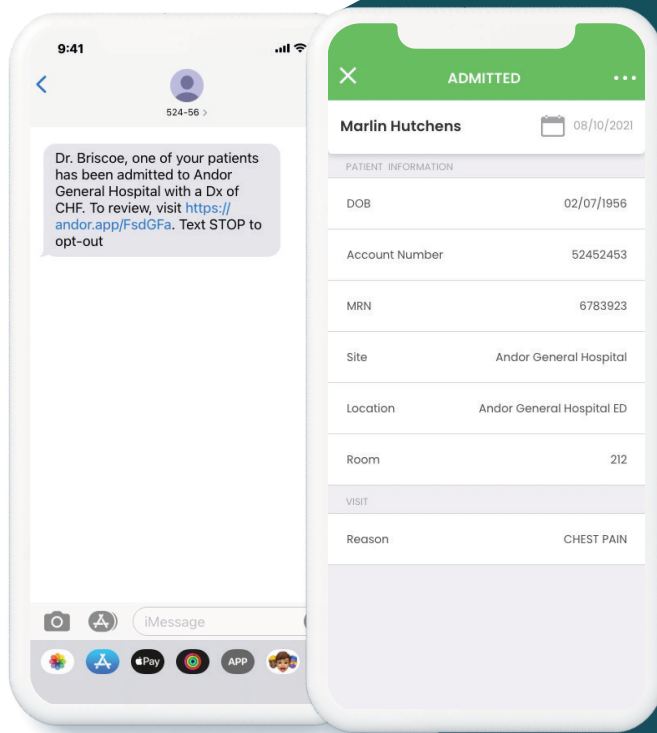

- Pull lab results in real-time
- Review medications
- Write voice dictated notes to the EMR
- Access the most recent discharge summary
- Enhance telehealth capabilities by retrieving patient records, intake forms, and more

Care Team Channel Notifications & Triggers

ThinkAndor can be configured by each care team member to send notifications of the signals that they find most important to delivering care.

Triggers can be set to automatically notify the care team regarding updates to a patient chart. Simply say, "ThinkAndor, send me the patient's lab result when it's ready."

Care teams can continue their work, and ThinkAndor will push these signals to care team members at the appropriate time.

> "Our partnership with Andor not only guarantees compliance, but it also enables last-mile connectivity to community clinicians. The Andor platform is an essential component of our strategy beyond our HIE and clinical communication systems to comply with these state and federal regulations," said Novlet Mattis, chief information officer, Orlando Health

About Andor Health

At Andor Health, our mission is to change the way care teams connect and collaborate. By harnessing machine and human intelligence, our cloud-based platform unlocks data stored in electronic medical records to deliver real-time actionable intelligence to care teams – both inside and outside of their enterprise. By optimizing communication workflows, our solutions accelerate time to treatment, decrease clinician burnout, and drive better patient outcomes. For more information, visit Andor Health or follow us on LinkedIn and Twitter.
