PYCUBE

Lost assets can cost a single hospital hundreds of thousands of dollars every year.

For example, the loss of small hospital assets in the laundry is a frequent and costly nuisance for many hospitals.

This includes the direct costs of replacement and indirect costs such as: time spent searching for equipment / acquiring replacement assets and time spent by biomed configuring the new assets to match the existing fleet.

ASSET PROTECTION

With Pycube's Asset Protection solution offers passive-RFID technology with intelligent software to help prevent potential asset loss.

Benefits

- Quietly monitors your assets' locations and movement
- Information available on demand in Pycube's tracking/analysis software
- When an asset is detected at an unauthorized location, such as moving through an RFID gate at a facility exit, the system activates to notify you of the breach

Catch run away assets before they're gone for good, with Pycube.
