

QGenda Capacity for Clinic & Exam Rooms

Increase exam room utilization. Improve patient throughput. Drive revenue.

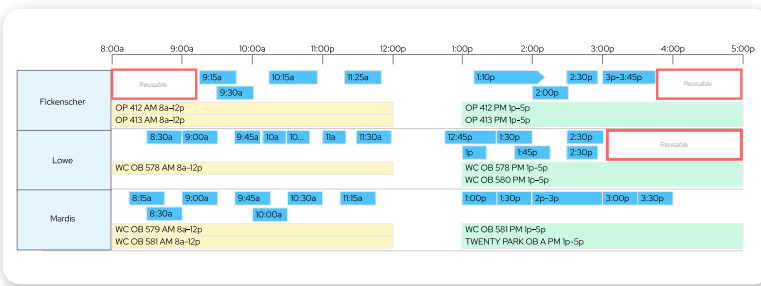

THE PROBLEM

75% of health systems lack accurate visibility into exam room utilization, leading to significant lost revenue.¹

SOLUTION

QGenda centralizes provider, room, and patient appointment information to analyze past & future utilization trends, identify scheduling opportunities in advance, & make proactive, data-driven schedule adjustments to optimize capacity.

QGenda Capacity enables ambulatory and clinic groups to:

- Save time & streamline clinic workflows
- Gain visibility & plan in advance
- Optimize resources & clinical capacity
- Increase exam room utilization
- Improve patient access & throughput
- Drive revenue

What makes QGenda unique to solve clinic & exam room capacity management challenges?

Direct connection with accurate, real-time provider schedules

Visibility into utilization, reusable space, & open time in advance

Tools to take proactive action directly in the platform

FEATURES:

- Intuitive interface
- Centralized, real-time view of room availability & attributes
- Standardized clinic cancelation & add-on process
- Configurable rules & validations
- EMR integration
- Utilization reports & dashboards

What is my overall utilization by location for the last 6 months?

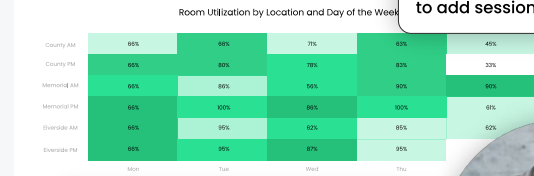

Peachtree Util.
74.4%

Riverside Util.
74.8%

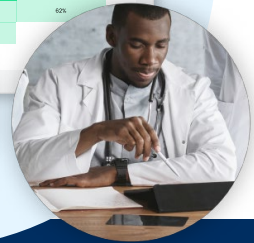

Memorial Util.
82.9%

County Util.
66.8%

Where do we have opportunities to add sessions?

Tuesday AM utilization is low.
We can schedule more sessions here.

Why must room & capacity management be connected to provider schedules?

Capacity management is most effective when provider and room schedules are aligned in a central platform in order to:

- Validate that exam rooms are not assigned to providers outside of their allotted clinical time
- Enable providers to view all schedules (call, time-off, room assignments, patients, etc.) in a central solution
- Streamline requesting and swapping and ensure automatic updates to other impacted areas of the schedule
- Access up-to-date, semantically-consistent data across the organization to track historical KPIs and analyze future trends
