

eConsults ease the specialty care burden

Ensure your PCPs get the timely specialist guided treatment they need to care for their patients in a primary care setting.

For over a year now, our healthcare system has been under great strain due to the Covid-19 pandemic. Over the last year, the US has seen a higher rate of medical practices are closing than before with the large majority of practices closing being smaller specialty care offices.

AristaMD can help fill the growing gaps in available specialty care. With the use of eConsults, providers can obtain quick access to specialist input and advice from AristaMD's panel of >200 specialists covering >70 specialty and subspecialty areas.

How do I know if my organization can benefit from AristaMD's eConsult service?

- Do your patients wait weeks, or months, for specialist appointments?
- Does your organization have open referrals (patients yet to be seen by specialists for over 30 days) over 30 days old?
- Is your organization looking to increase patient satisfaction scores, and quality score metrics such as HEDIS, NCQA, etc...?

If the answer is yes to any of the above questions, then eConsults can improve patient care at your organization.

Primary care providers can treat a subset of their specialty referral cases within their office with some specialty guidance from an AristaMD specialist.

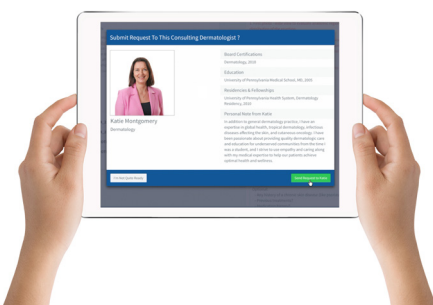

More than 70% of routine clinical referrals can be safely treated by PCPs with the guidance of specialists and, based on previous data, eConsults can **resolve 1 out of 3** open referrals. Our clients have reported great success with the AristaMD eConsult service, for treating their patients in the office or virtually.

eConsults help to alleviate the effects of COVID-19 by...

- reducing patient appointment wait times, preventing conditions from worsening and ED admissions/readmissions from increasing.
- reducing referral wait times and increasing specialty care access for all patients.
- keeping patient care in PCP office, reducing unnecessary exposure for patients and providers.
- improving provider satisfaction by providing PCPs with a resource to expand care capacity and more efficiently treat the current patient surge.
- equipping providers with additional care information related to COVID-19 vaccines and post-COVID syndrome.
