Tell-Tale Signs It's Time to Modernize Your Credentialing Solution

In today's healthcare environment, with continued financial pressure, provider shortages, and growing patient demand, the ability to get new providers credentialed, enrolled, and scheduled quickly is more important than ever.

However, if your credentialing technology is doing little to expedite the process, it's time to consider a new solution. **Here are tell-tale signs your system is holding your organization back:**

1 Time-to-credential has plateaued.

2 Inefficient or ineffective product support is causing roadblocks.

3 Functionality breakdowns and lack of enhancements are leading to work-arounds.

4 A poor user experience or insufficient training is preventing new credentialing and enrollment professionals from being productive right away.

5 Add-on fees for necessary functionality and support are driving costs up and ROI down.

6 Multiple products or separate modules are needed to manage the process in full.

7 Credentialing and enrollment data is not connected to your greater healthcare IT ecosystem and workforce management strategy.

Is your credentialing system costing you time, money, and talent?
