

Health systems have a need to share patient records and communicate with trusted providers and caretakers in order to better facilitate coordination of care.

Whether it be discharge care facilities, specialist providers, therapists, or a variety of providers, Chart Access provides secure access to patient records and messaging for organizations providing care outside of a health system. It also allows these providers to contribute limited documentation into the electronic medical record (EMR).

This solution is currently available for health systems using Cerner Millennium® clinicals.

FEATURES & BENEFITS

ELECTRONIC ACCESS

Replaces the time consuming manual process of sending patient records with easy electronic access.

PATIENT WORKLIST

Provides a worklist to help providers manage patients at their facility & view appointments by health system providers.

SECURE MESSAGING

Communicates with health system care teams through a secure messaging feature. Providers view all messages in the Message Center.

REDUCE COMPLIANCE RISK

Provides a way to securely share records while limiting it to only patients receiving care at an outside facility.

PATIENT DOCUMENTATION

Complete patient documentation prior to scheduled visits. Chart Access saves in Cerner and pulls into the provider's notes.
