Care. From Anywhere.™

- ✓ Enabling remote care in the home
- ✓ Extending the reach of caregivers
- ✓ Promising real medication adherence

Company Overview

Omcare is a digital health company pioneering a customizable, home health platform that allows healthcare organizations to extend care into the home via a secure telehealth infrastructure and integration with our patented medication dispensing technology.

Omcare allows healthcare organizations to rapidly deploy a home care strategy while simultaneously customizing the provider and patient experience to fit their brand. The product's open architecture also allows for the integration of provider and consumer tools aimed at:

- Addressing the increasingly complex care needs of the Over 65 and dual populations.
- Delivering a platform that allows for a tailored (branded) customization of current chronic and acute solutions
- Extending caregiver reach and efficiency
- Promising right medication, right time, right person

We are partnering with pharmacies, payers, and providers to bring existing infrastructure and services into the home - to improve health, reduce cost, increase member engagement and elevate patient experience.

Why Omcare

Omcare was designed to remove 'technology as the barrier' and serve as the portal of healthcare services into the home. The Omcare Home Health Hub® increases access through the simple, one-touch user interface that reduces barriers associated with tech literacy, physical decline, geography and language. Omcare serves as a single hub of care, built upon the foundation of medication management, enabling integration to a growing portfolio of tech-enabled devices and services. The result is a compelling continuum of care without leaving home.

Why Now

1. Rapidly aging population (11K turning 65 every day)
2. Dramatic rise of expensive, sick population (68% of 65+)
3. Caregiver shortage (familial and professional)
4. Consumer demand for care in the home.
