

## CARESIMPLE HEART FAILURE

Simplify and expand your heart failure remote patient monitoring (RPM) program with the solution that makes it simple for you and your patients.

# CARESIMPLE HEART FAILURE

Have you had enough of pairing problems?

Keeping inventory for tablets and Bluetooth devices?

Taking endless patient support calls? It's well known that RPM can drive positive outcomes for patients with heart failure<sup>1</sup>, but it doesn't have to be complicated. CareSimple was built on a vision to make RPM available for all patients, and provides a comprehensive heart failure monitoring program made for simplicity of use and scalability.

<sup>1</sup> American Heart Association. (2019). Using Remote Patient Monitoring Technologies for Better Cardiovascular Disease Outcomes Guidance. Retrieved from [www.heart.org/-/media/files/about-us/policy-research/policy-positions/clinical-care/remote-patient-monitoring-guidance-2019.pdf?la=en](http://www.heart.org/-/media/files/about-us/policy-research/policy-positions/clinical-care/remote-patient-monitoring-guidance-2019.pdf?la=en)

## HOW IT WORKS

### 1 Onboard patients

Order new patients, selecting the CareSimple 4G Blood Pressure Monitor, Scale, and one of the available heart failure care plans. You can onboard patients from the CareSimple portal, in bulk or directly from your EHR.

### 2 Home delivery

The CareSimple 4G Blood Pressure Monitor and Scale, both delivered at home, come with batteries and automatically transmit readings directly using cellular network, meaning that your patients don't need to do any setup, pair the device, or download an app.

### 3 Monitor with smart alerts

Your patients only need to take readings daily. The CareSimple heart failure care plans are powered by smart alerts that automatically help your clinical team assess who needs attention and provides tools to engage and educate patients

## USABILITY & INTEROPERABILITY

The official position of the American Heart Association (AHA) on RPM is that it's efficacy is highly dependent its design and usability, as well as its interoperability with the electronic health record (EHR) and other health information technology<sup>2</sup>. These represent the pillars of the CareSimple, as our interface-less approach for patients results in less than 0.5% of shipped devices causing connectivity problems, and our integration engine can connect to more than 40 EHRs including Epic, Cerner, athenahealth, eClinicalWorks and AllScripts.

## FEATURES

### Cellular blood pressure monitor & scale

No app, pairing, WiFi, training or technical setup are required.

### Built-in workflows for heart failure and other chronic conditions

For heart failure, and/or other chronic conditions like diabetes and COPD.

### Award-winning patient education

Engaging and easy-to-understand Healthwise® articles and videos for your patients.

### Data analytics

Review alerts and trends using the CareSimple care manager dashboard.

### EHR integration

Onboard patients, receive vitals in near real-time and automate reporting in your EHR.

### Home delivery logistics

Devices and consumables are delivered to your patients, or to a central location.

### Technical support

Patient-facing and clinical technical support available by phone, email or messaging.
