Virtual **Nursing**

Hicuity Health Virtual Nursing offers an expansive menu of customized virtual nursing functions designed to address the significant increase in bedside nurse turnover and the increasing need to support bedside nurses in providing in-person care. As healthcare facilities rethink the delivery of nursing services, a customizable virtual nursing component will be an important component of forward-looking nursing strategies.

BENEFITS

RN Focus on Critical Bedside Tasks
In absorbing a range of inpatient nursing tasks, virtual nursing enables short-staffed bedside teams to focus on those tasks that can only be done in person

Reduced Need for Travel Nurses
By re-assigning tasks that do not require the nurse to be in-person with the patient, the need for and expense of travel nurses to augment your permanent work force can be reduced or eliminated.

Consistent Nursing Operations
Enabled by our proprietary HUB workflow management software suite, our virtual nurses are able to follow system-specific, pre-prescribed workflow processes customized to individual clients.

Breadth of Support
Hicuity's virtual nursing services cover a wide range of nursing activities, ranging from active patient care to monitoring, medication reconciliation, mentoring, second person verification of medication, patient admission or discharge, pre and post-surgery follow-up, and documentation.

Range of Venues
Virtual nursing services contribute to patient care throughout an inpatient facility, including admission, ED, ICU, stepdown, med/surg, post-acute, and rehab, as well as hospital at home settings.

FEATURES

Reliable RN availability

Around-the-clock support, as needed

2-way A/V enablement

Customizable procedures and workflows

Flexible engagements
