

The Fastest Path to Patient Care Starts with Automation

Waiting for regulation or payer-sponsored solutions to solve the prior authorization crisis is costing providers.

Prior authorizations are increasingly burdensome for providers, but fewer than a third have adopted automation to help. The market for prior authorization technology is as complex as prior authorizations themselves, and no one solution is ideal for all providers.

The State of Prior Authorization

40%

of physicians have staff who work exclusively on prior authorizations.¹

22%

of providers conduct fully manual prior authorizations, with 35% fully electronic and 43% partially electronic.²

60%

of RCM leaders say staffing shortages and training gaps are a challenge.³

89%

of physicians report that PA somewhat or significantly increases physician burnout.¹

Delays in Prior Authorizations Have an Impact to Patient Care

93%

of patients report a care delay due to a prior authorization request.¹

82%

of providers reported that Prior Authorizations delays lead to treatment abandonment.¹

53%

of providers report that patient care cannot wait for the health plan to approve the PA.¹

Better Access Starts with Action —Get the Insights

Our latest infographic reveals how manual prior authorizations create real barriers to patient care—leading to costly delays, increasing denials, and slowing reimbursement. Discover how leading health systems are leveraging automation to accelerate access, streamline approvals, and improve outcomes for patients and providers alike.
