

Does your organization have what it needs to optimize capacity?

It’s easy to tell when you have issues with exam room utilization. Whether that means that you need more clinical space or realize that your exam rooms are too frequently sitting idle.

The more difficult part is understanding why your organization is not reaching the optimal level of clinical capacity. To get to the root of the issue(s), start by asking the following questions.

Do you have real-time visibility into your provider schedules?	Do you have centralized visibility into accurate room usage and availability?
It’s critical to know where your providers are and what activities they’re performing at all times. Stay on top of <i>all schedule changes</i> , including approved PTO, with a provider schedule that updates in real-time.	You must have accurate visibility into when your clinic rooms are being used and how. It’s important to standardize your room management process and include <i>equipment and location details</i> to make reallocation of space possible.
Do you have daily patient schedules directly connected to your room assignments?	Do you have access to actionable analytics to make utilization improvements?
Don’t force your providers and administrators to search for information in disconnected solutions. Patient encounter information should automatically import into your capacity management solution.	You can’t get better if you don’t know how you’re actually performing. Analytics have to be up-to-date and easily accessible in order to make informed decisions to adjust provider and room schedules to optimize capacity.

If your answer was “no” to any of the above, it’s time to implement a purpose-built capacity management solution. One with great visibility into room usage and availability, that works with a smart provider scheduling solution, integrates with your EHR, and provides analytics necessary to make proactive decisions that increase utilization.

Thankfully, [QGenda Capacity](#) checks all of the boxes. [Schedule a customized demo today to find out more about QGenda Capacity](#), and how it connects with the rest of the QGenda ProviderCloud® platform to provide you with accurate information on room utilization, provider deployment, opportunities to improve capacity, and more.
