

Advanced Scheduling for Providers

Manual and outdated physician scheduling processes hurt efficiency and productivity, making it difficult for healthcare organizations to optimize the use of their most valuable resources: **their providers**. In fact, a recent survey indicates that physicians spend an average of 15.5 hours per week on paperwork and administration. This is time not spent with patients, which can lead to frustration and burnout.¹

QGenda Advanced Scheduling for Providers offers a single solution for the entire enterprise while addressing the unique scheduling complexities of each healthcare specialty, department, and organization. The solution creates equitable, rules-based schedules faster and optimally aligns physicians – including provider preferences and work rules – with patient demand.

Advanced Scheduling for Providers helps organizations:

Increase operational efficiency

Optimize provider utilization

Improve provider satisfaction

Increase Operational Efficiency

Predictive Scheduling Helps Build Optimized Physician Schedules Faster

Advanced Scheduling for Providers is powered by an intelligent, rules-based scheduling engine and predictive scheduling tools that automate and streamline the schedule creation process. The configurable QGenda algorithm generates an optimized schedule in seconds by considering physician skill sets and specialty- or department-specific rules and identifying any openings or conflicts that require resolution. QGenda also allows schedulers to set block schedules to facilitate rotating medical students through the necessary training.

QGenda simplifies the workflow for schedule changes, and care team members instantly get notified about the revised schedule. Over time, the scheduling algorithm learns from previous activity. As learning increases, the solution is better able to predict the optimal schedule based on prior rules, schedules, and preferences.

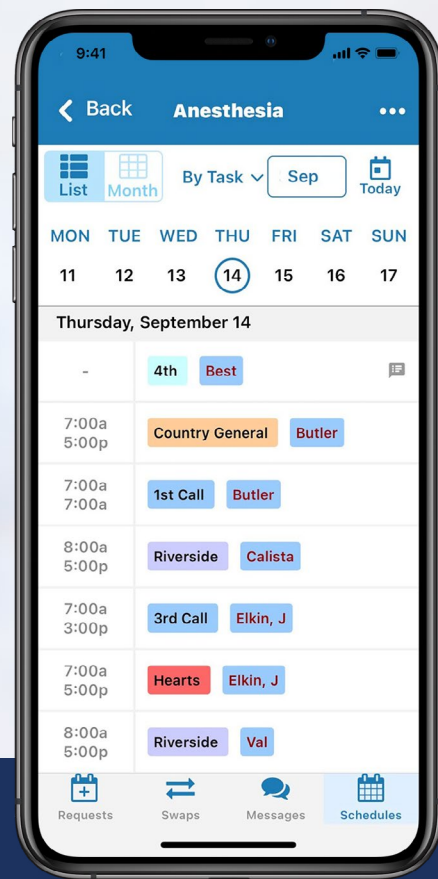

Improve Schedule Visibility

QGenda provides a single source of truth for physician scheduling. With system-wide visibility, organizations ensure that the right person is in the right place at the right time. Users can quickly see the correct schedule, whether viewing for a single department or the entire provider deployment across the system. Schedule information for other care team members paired with physicians, such as Physician Assistants and Nurse Practitioners, can also be viewed from a single source.

Mobile App

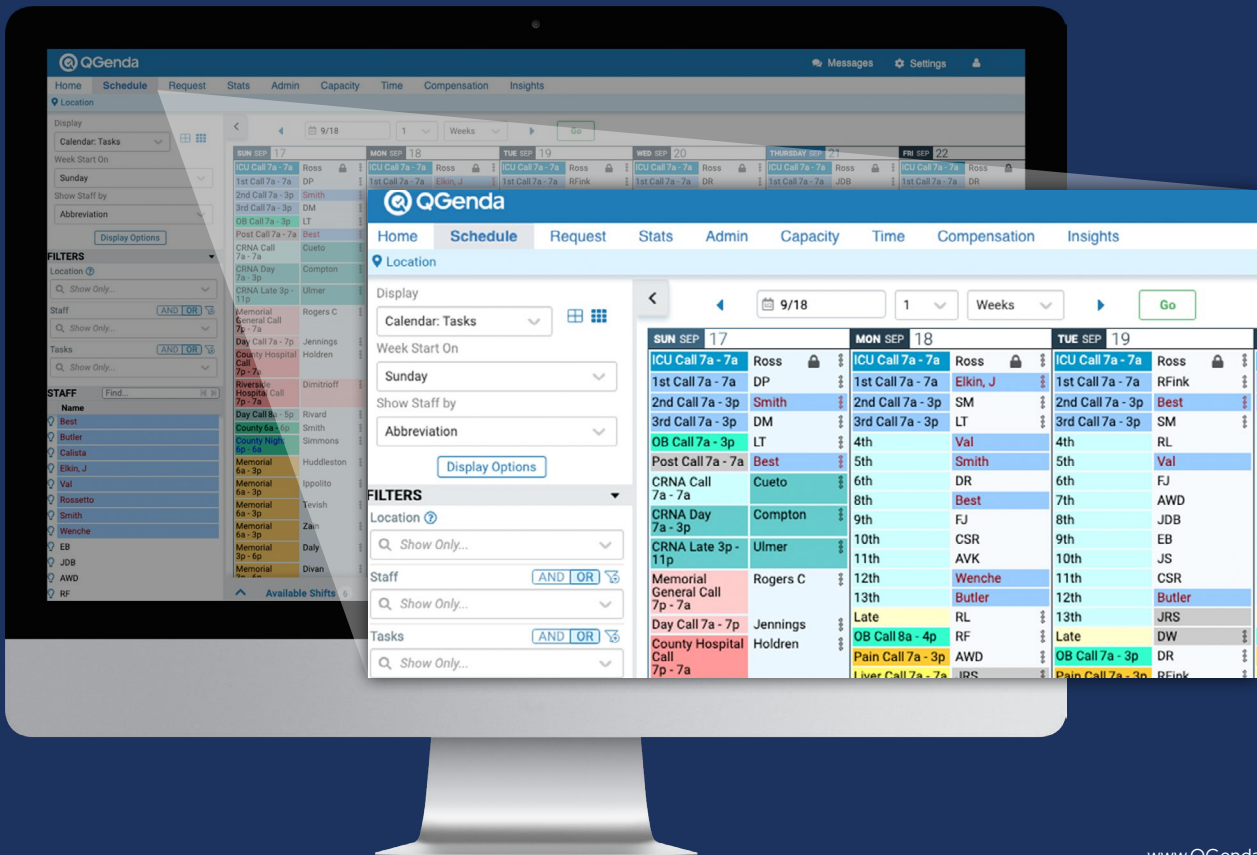

The QGenda mobile app gives providers immediate access to the most up-to-date and accurate schedule on any device. Color-coding and configurable filters make it easy for providers to identify when and where they are working. Physician schedules can also be synced with Google, Microsoft, and iOS calendars.

Optimize Provider Utilization

Ensure Provider Coverage Aligns with Patient Needs

Provider workforce optimization starts with the schedule. Using QGenda, administrators can proactively address scheduling issues before they occur to ensure patient demand is met. QGenda ensures providers are available when and where patients need them to improve access and care.

Drive Workforce Optimization and Inform Strategic Decisions

Predictive scheduling and workflow automation tools help to optimize staffing and increase productivity. Customizable analytics tools provide real-time insights into workforce usage and deployment with data-driven dashboards on provider availability, utilization, and cost, supplying the analysis needed to address issues and take quick actions.

Streamline Reporting and Analytics

QGenda includes pre-built reports to view calendars by task or staff, review the swap log, or identify work patterns to easily see how the workforce is deployed. This information empowers data-driven decisions to increase productivity and efficiency and better understand potential bottlenecks. Insights reports also help organizations identify opportunities for future optimization and more effectively manage costs. For example, the Provider Analysis report tracks physician targets, such as clinical, admin and time away targets, throughout the year. To aid with resource planning, the Staffing Plan vs. Actual report helps organizations answer whether they have the proper clinical coverage.

Improve Provider Satisfaction

Flexible Shift Swaps Promote Autonomy

Convenient self-service gives physicians more flexibility and control over their schedules. Physicians and other clinicians on the schedule can submit requests for time away, vacation, CME, meetings, or any other relevant activity. These scheduled users also have the ability to initiate swaps and trades using the QGenda mobile app. The rules-based engine streamlines the administrative process and ensures that all change requests adhere to provider skillset and FTE requirements.

Achieve Equitable and Balanced Schedules

Complete and equitable schedules based on work targets set for the provider throughout the year improve engagement and satisfaction. Providers can view vacation time, rotation information, and clinic-based scheduling in a single solution. This convenient access to system-wide information helps to promote satisfaction, improve work/life balance, and mitigate provider burnout.

Seamlessly Integrate Healthcare Workforce Data

QGenda Advanced Scheduling for Providers delivers key workforce data to critical systems in the healthcare IT ecosystem, such as the HRIS and EHR, to improve processes, efficiency, and accuracy. QGenda offers seamless integration with more than 85 key systems, including clinical communications, resident management, and more.
