By Validic, Inc.

☆☆☆☆☆

0 review

Validic® Impact is a remote patient monitoring (RPM) and digital health operating system, built on our award-winning healthcare IoT platform. You can customize and integrate the system into their existing healthcare systems and workflows, quickly designing, deploying and scaling new digital health programs to meet their needs. Validic Impact’s administrative tools deliver patient data when you need it, in a format that is simple to visualize and use. The straightforward onboarding workflows help you enroll new patients quickly and efficiently.

Differentiators

Differentiators vs EHR Functionality:

Validic® offers health data solutions to remove the burdens associated with data access, integration, standardization, and storage. Validic has built hundreds of one-off integrations to the premier home health and wearable devices. Building one connection to Validic, you can access the data from over 530 disparate health sources. We offload and maintain the business relationships, technical updates, and ongoing support – including vendor agreements, third-party terms and conditions, bugs, and compliance with industry regulations and standards. Validic has worked with industry leaders – like WebMD, Humana, AARP, Cleveland Clinic and more – to provide platform and mobile solutions that simplify health data, enabling you to derive and analyze meaningful insights and interactions with your population. We guide healthcare and wellness organizations through the technical complexities with operationalizing personal health data by delivering scalable technology that increases efficiency, effectiveness and security. Validic delivers data seamlessly into your system – empowering you to create a more personalized, integrative, and engaging user experience.

Differentiators vs Competitors:

Validic Inform is the true device-agnostic platform for personal health data. With one connection to Validic Inform, your organization gains access to secure, standardized data from more than 530 unique personal health devices – the broadest selection available on the market. As the only streaming platform for personal health data, Validic Inform offers healthcare the next-generation tools for integrating continuous and aggregated data. With a simplified data retrieval process and expanded data model, Inform provides the most efficient means to ingesting near real-time personal health data without the need for additional IT resources. With insight from continuous monitoring devices, program managers can better track patients' program adherence, lifestyle decisions and vitals.

Validic HealthBridge

By Validic, Inc. ☆☆☆☆☆ 0 review

The Validic® HealthBridge app – available on the Apple App Store and Google Play store – provides a dynamic experience for users to connect their devices, track their progress and share their data as part of a remote monitoring program.

With HealthBridge Express, a custom kit is sent to the member's home, complete with a pre-provisioned tablet and pre-connected, home-use medical devices. The program is ready to go, out of the box.

Differentiators

Differentiators vs EHR Functionality:

With Validic HealthBridge™, a turnkey patient engagement application is ready to go at the flip of a switch – available on the Apple App Store, Google Play store. The HealthBridge app can save organizations months in development time while still providing patients the support and insights they need. The HealthBridge app serves as the member experience for Validic Impact remote patient monitoring solution. With HealthBridge Express, members can easily participate in their condition management program by making use of the device they already know and carry with them every day, their smartphone. Members can connect their home-use, Bluetooth® medical devices, review their device readings, and stay connected to their program provider.

With the Express feature, the convenience of HealthBridge can be extended to patients and members who are either not willing or able to manage device set up on their own. Custom device kits are sent to members’ homes with HealthBridge pre-loaded on the tablet. The devices are pre-paired and ready to use with the program – getting your clinical workforce out of the IT-support business.

Differentiators vs Competitors:

Validic HealthBridge™ is our turnkey patient engagement application for digital health — available on the Apple App Store, Google Play store. The HealthBridge app serves as the connection between members and their care team, allowing them to easily connect their personal health devices, review their device readings, and stay connected to their program provider. HealthBridge prevents unsolicited health information from being sent to care teams by only facilitating device connections that match the program a member is enrolled in.

HealthBridge Express gives Validic the unique ability to support a full spectrum of fully-integrated programs — from small bring-your-own-device trials, to scale deployments supported with device kits. With HealthBridge Express, everything a patient needs to participate in their condition management program will arrive at their home, ready to use out of the box. The customized kits include a cellular-enabled tablet and pre-connected home-use medical devices that require no WiFi connection, account set up, or device pairing. The member simply inputs a secure, unique pin to activate their account and start their program. HealthBridge Express supports the use of any third-party device logistics and supply chain partner, with pre-existing integrations to Trapollo and iRedeemHealth. Unlike other competitors, our hub-based solution is device-agnostic and supports the full library of devices available through our award-winning healthcare IoT platform.
