

# Equitable healthcare, digitally-enabled.

Ensure *all* your patients can access the care they need — when and how they need it.

Propeller helps health systems reduce barriers to access in medically underserved and socioeconomically disadvantaged communities.

## Extend care beyond the walls of the clinic through remote monitoring

- Expand your reach to patients with transportation limitations or difficulty attending in-person appointments.

## Identify high-risk individuals and groups within your patient population

- Clinical insight tools provide objective visibility into patient disease control and notify care teams of patients who may require more immediate intervention.

## Improve quality metrics in Medicaid and Medicare populations

- Up to 63% decrease in rescue inhaler use<sup>1</sup>
- Up to 8% improvement in medication adherence<sup>2</sup>

## Power sustainable behavior change through precision interventions

- Personalized content and virtual coaching cater to each patient's unique motivations, goals, barriers, digital and health literacy levels, and socioeconomic environments.

## Remove barriers to technology or internet access

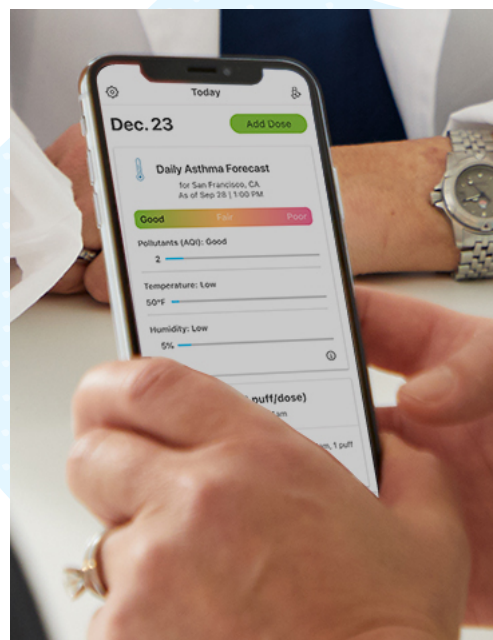

- Cellular hubs provide an alternative and convenient means of data capture – without compromising the overall patient experience.

## Address potential environmental determinants of health at the patient level

- Customized in-app features such as a daily asthma outlook provide critical information to patients, helping them avoid potential outdoor triggers.

## Leverage Propeller's experience partnering with public health entities to scale your organization's health equity efforts

- Propeller has spearheaded numerous public health initiatives with government, research, and healthcare organizations.

Health equity doesn't have to be tackled alone.
