

The right diagnosis, every time, for everyone.

The New Standard for Pre-Visit Patient Intake, Risk Assessment, Diagnosis, SOAP Charting & Follow-Up

SOAP (Subjective, Objective, Assessment, Plan) has created the world's first patent-pending, clinical grade application to offer physicians, health systems, clinical researchers, pharma researchers, employers/employees, & life insurers the most superior methodology to improve the accuracy, truthfulness, and detail of pre-visit patient reported data, analyze the data with 500 proprietary risk assessment algorithms to identify early disease risks, generate a differential diagnosis, and chart it all in a SOAP proprietary formatted clinical note, that is easier and faster to read and absorb. Finally, it closes the care loop to ensure medical compliance.

"SOAP combines the *intimacy* of the human voice with the *power* of animation coupled with the *intellect* of experts to deliver on its promise of better data collection and analysis."

The SOAP Difference

Clinically Validated

High Completion Rates

95-100%

Whether at home or in the office, patients were easily able to finish.

High Satisfaction Rates

90%+

It's fun to speak with a digital human!

More Total Data

200%

Creates Precision Patient™ profiles.

More Actionable Data

44%

Data that changes diagnoses & care.

Reduced Intake & Documentation Time

66%

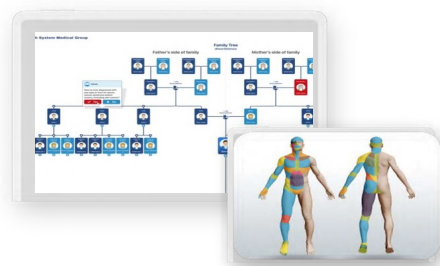

Physicians save over 2 hours per day.

Reduced Diagnostic Errors

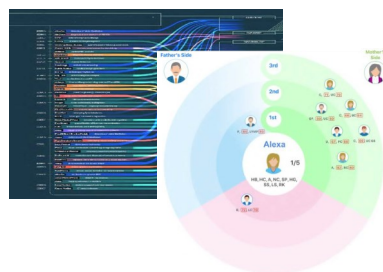

60%

Reduce liability & malpractice suits.
Improve patient care and outcomes.
