

**Unify information and
displays in the patient
room to streamline care**

Save clinical teams time by providing access to critical real-time updates enabling seamless communication and collaboration between care teams, patients and their families. By leveraging the devices already in use, we empower organizations to flexibly work within your existing wall space while significantly reducing

EMR Integrated

With full integrations and automatic updating, you can provide care teams with the most up-to-date patient information and experience data so they can make decisions and take action with accuracy.

Configurable

The modular library is easily configurable based on your workflows and patient needs by unit, floor or specialty.

Accessible

Works effortlessly with your existing patient footwall televisions. No new hardware or additional wiring is required.

Integrated Digital Whiteboard Features

| | |
|----------------------------|---|
| Real-Time Data | Integrates with your EHR to ensure patient information is automatically up to date based on the patient's record. |
| Configurability | Select from standardized widget library to determine what types of information should appear on the whiteboard in which setting. |
| Existing Hardware | Utilize the application without the need to install and support a second display within your hospital infrastructure, reducing complexity and cost. |
| Intuitive Interface | Easy to navigate user interfaces make it easy for everyone to find the information they need, requiring less training and support. |
| Screen Themes | Modify the user interface for hospital branding, kid friendly displays and more. |
| Time of Day Modes | Automatic light/dark mode updates based on the time of day for patient comfort. |
| Easy Enable/Disable | Enact automation rules that can disable the display for light sensitive or agitated patients who don't need an always on display. |
