Introduction

In the fast-paced world of healthcare, every second counts. Hospitals are dynamic environments where the seamless availability of assets, especially point-of-care devices are crucial for providing quality patient care. Nevertheless, an inconspicuous challenge quietly permeates the corridors of healthcare facilities – the phenomenon of Asset Hoarding.

What is Asset Hoarding?

Asset hoarding is a term coined by a Pycube customer. It refers to the unintentional or deliberate act of healthcare staff hiding brand new pieces of equipment in obscure locations, like desk drawers, on top of ceiling tiles, or other hidden places, thinking they'll remember where they stashed them. Unfortunately, over time, these assets become forgotten and often left unused until an emergency arises.

The Dangers of Asset Hoarding for Hospitals

Missed Maintenance and Equipment Reliability

Asset hoarding can inadvertently lead to missed maintenance of vital equipment, posing a significant risk. When crucial devices are stashed away and forgotten, they are often neglected, potentially resulting in malfunctions during emergencies. This negligence can compromise patient care and even endanger lives.

Operational Inefficiency

Asset hoarding leads to operational inefficiencies within hospital facilities. Valuable time is wasted searching for misplaced assets, impacting staff productivity and potentially compromising patient care.

Equipment Underutilization

The forgotten assets can remain untouched for extended periods, leading to underutilization of expensive equipment. This not only affects the hospital's return on investment but also hinders the staff's ability to leverage advanced technologies for improved patient outcomes.

Emergency Response Challenges

During emergencies, every minute is critical. Asset hoarding can create delays in accessing essential equipment, potentially jeopardizing patient lives. Quick and reliable access to point-of-care devices is paramount in emergency situations.

| Pycube to the Rescue

Pycube emerges as a beacon of efficiency in the face of asset hoarding challenges. Utilizing intelligent software combined with cutting-edge RFID technology, Pycube's solution provides hospitals with a powerful tool to combat asset hoarding and elevate operational excellence.

Cutting-edge RFID
Technology

Intelligent Software

The Pycube Advantage

RFID Technology: The Game-Changer

Unlike RTLS, Pycube's RFID tags are the game-changer hospitals need. These battery-free tags offer a cost-effective, easy to implement and sustainable solutions for tracking assets. The tags communicate seamlessly with Pycube's system, allowing hospital staff to locate assets quickly and effortlessly.

Asset Visibility and Management

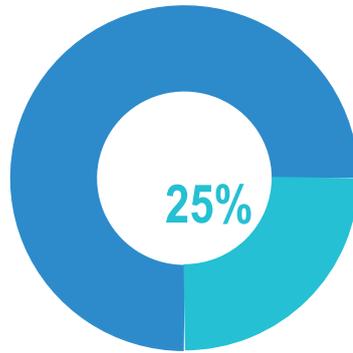

Pycube's solution provides comprehensive visibility into the location and status of each asset. This level of transparency empowers hospital administrators to optimize asset allocation, preventing hoarding tendencies and ensuring a more equitable distribution of resources.

Conclusion

Of time is spent searching for medical equipment, by hospital employees

Of equipment is lost annually due to lack of proper asset management

In a study conducted by General Electric Healthcare found

Nurses spend

an average of 21 minutes per shift searching for lost equipment

In the relentless pursuit of providing optimal patient care, hospitals must address the hidden challenges that impede efficiency. Asset hoarding, once a silent threat, can be conquered with Pycube's innovative intelligent software and RFID solution. By embracing this technology, hospitals can transform their operations, ensuring that every piece of equipment is where it needs to be when it needs to be there. Say goodbye to asset hoarding and hello to a new era of efficiency and excellence in healthcare.

Thank you for taking the time to read our eBook. If you are interested in exploring solutions to eliminate asset hoarding, we invite you to contact Pycube for further information and assistance. Our team is ready to provide you with the support and expertise you need.
