

Transform clinician workflows and improve outcomes

with the clinical intelligence platform for value-based care

Best in KLAS clinician copilot

Navina escorts the clinician throughout their entire workflow, from pre-visit preparation to clinical decision-making and audit-ready documentation. Combining historical data and conversational dialogue, Navina's proprietary AI surfaces relevant and timely insights to improve outcomes while reducing provider burnout.

Complete risk adjustment

Navina's clinical AI copilot improves risk adjustment accuracy by turning real-time EHR, HIE, and claims data into actionable insights. With prospective coding embedded in provider workflows, Navina reduces chart chasing and retrospective reviews—maximizing reimbursement and easing admin burden.

Improved quality performance

Navina enhances Stars and HEDIS® programs by enabling real-time care gap closure with patient cohorting in the Quality Workspace—prioritizing compliant, triple-weighted, and excludable measures without the manual burden. AI-powered insights and notes from care team members are automatically surfaced to clinicians at the point of care, streamlining workflows.

End-to-end network management

Navina provides real-time analytics to optimize network performance, offering visibility on a clinician, practice, and network level. Navina's dashboards allow managers to track key value-based metrics and trends—including RAF scores, quality performance, and utilization.

9 min

Saved on visit prep per complex patient

75%

Acceptance rate of Navina's diagnosis recommendations

49%

Increase in identified diagnoses (vs. prior year)

Why leading healthcare organizations choose Navina

- ✓ **Market-leading AI**
Identification of chronic conditions and new suspected conditions based on structured and unstructured data
- ✓ **Evidence-based**
Every AI-powered insight is backed by clinical evidence, boosting clinician trust and confidence
- ✓ **Streamlined workflow**
Dedicated physician and coder workflows improve efficiency before, during, and post visit
- ✓ **Unparalleled user adoption**
Physician-first user interface native to the EHR workflow ensures high clinician satisfaction

Navina's platform stands out because of its ability to reduce the burden on physicians while also giving a more appropriate history of the patients conditions. It backs up every insight and diagnosis with clinical evidence presented at the time of a patient visit.
