*Welldoc Diabetes Rx/OTC is an FDA-cleared medical device ("BlueStar"), intended for use by health care providers and their adult patients with type 1 or type 2 diabetes. For full labeling information, visit www.welldoc.com. The other Welldoc products are non-FDA-cleared and intended to promote general wellness and education/self-management of various chronic disease states.

We're here to help

Welldoc can help you extend your chronic care programs by delivering a singular digital health solution which not only supports patients between office visits, but also elevates engagement between patients and care teams. We connect patient generated data to share personalized digital coaching and insights, empowering patients to manage their chronic conditions, and enabling care teams to practice at the top of their license.

High Engagement Showed a 1.6% Drop A1C

Users enrolled in BlueStar® through a Diabetes Educator at point of care that engaged more than 2.5 times a week had a 1.6% drop in A1C¹

7.4 - 12 mmHg Drop in Blood Pressure

Data analysis examined the potential impact of our diabetes solution on hypertension in the first 3 months of use²

77% Controlled Blood Glucose

Observed among consistent users when in conjunction with medication changes³

Individuals

An AI-driven, real-time digital coach app that provides a personalized approach to self-management.

Care Managers and Health Coaches

Clinical data sharing and insights support your care managers and coaches in delivering exceptional care.

Population Health

Access population level health data and analysis through our management portal.
