

Reclaim Your Time and Revenue

Revenue cycle management (RCM) is becoming increasingly challenging for providers to navigate as payer rules and behaviors are continuously evolving, leading to denied claims and revenue loss. **That’s why we built Adonis Intelligence** - a data-first platform that offers AI-powered alerting and actionable recommendations to help providers achieve best-in-class financial and operational outcomes. How do we do it? By continuously learning from millions of claims and supplemental sources like payer portals, we uncover trends and policy changes before they impact your revenue.

Stay ahead of payer changes

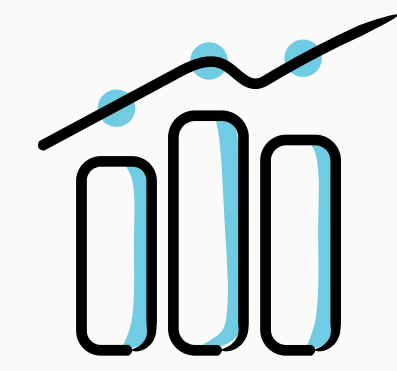

Payers are known to change their rules and behavior that only become apparent weeks later when claims are denied. Adonis Intelligence uses **predictive analytics** to identify payer-driven changes early, empowering your RCM team to stay proactive.

Prioritize and action the highest impact RCM issues

Adonis Intelligence delivers **personalized, real-time alerts** and **recommendations**, identifying issues across all stages of the revenue cycle to help your team take timely action on the highest-priority tasks.

Empower your team

Unlock your team’s full potential with technology designed to simplify complex processes, enhance efficiency, and build resilience in a dynamic industry. Help your team **focus on what matters and take the best actions** to achieve maximum impact.

The Alerting Capability That RCM Teams Are Missing

Adonis alerts monitor the entire lifecycle of a claim—from creation to adjudication — leveraging predictive analytics to proactively address challenges at every step, ensuring that no issue is overlooked.

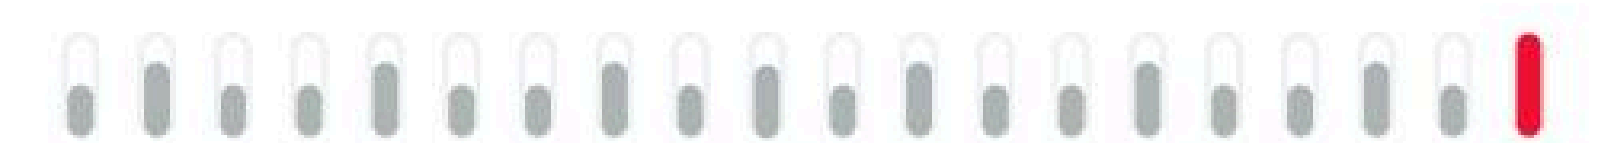

- Claims Created
- Claims Submitted
- Claims Remitted
- Underpayments
- Claim Denials
- Accounts Receivable

UHC Denials Increased by 104%

UnitedHealthcare has seen a 104% increase in prior authorization denials for claims with CPT 97110.

1h ago

Reasons and Recommended Actions

Powered by **Adonis AI** ✨ Updated and synced with the EHR 6 hours ago

Reasons:

- **Lack of prior authorization or precertification:** The CO197 denial indicates missing prior authorization or precertification.

Recommendations:

- **Obtain prior authorization:** Educate PT clinics on updated requirements.

Delivering Value Across Your Organization

- ✓ **Proven Implementation:** rapid time to value with little or no impact on day to day operations
- ✓ **Real-Time Visibility Across All Lines of Business:** leverage executive-level reporting, workflow management, payer contract negotiations, and more
- ✓ **Assess Payer Performance:** Payer Scorecards serve as a benchmark to compare relative performance and help teams prioritize critical payer-specific challenges
- ✓ **Predictive Denials:** proactively identify high-risk claims before submission to prevent revenue loss
- ✓ **Trusted Strategic Partnership:** Go beyond tools with a dedicated partner offering personalized support, expertise, and guidance to drive the success of your RCM initiatives.

“It is allowing us to **identify issues before they become monstrous**. Before Adonis, it would take us longer to identify not only what the issue was, but how impactful it would be on our entire book of business. With Adonis, if we have an issue, it will immediately identify it for us, and it will bubble up all of the impacted inventory associated to that particular denial or hold that we’re seeing.”
