

CASCADE™ Medical Lockbox

KEY BENEFITS

Streamline your receivables with a lockbox designed specifically for healthcare

MediStreams Medical Lockbox offers healthcare providers a total solution for lockbox services. The solution delivers increased velocity of cash flow, increased operational efficiency, and a reduction in administrative overhead.

The service can be coupled with conversion of paper EOBs to 835 posting files for input to a client's A/R system, billing software, or practice management systems. Patient Payment Processing and Correspondence indexing services add value with configured posting files and the capability to work correspondence in a digital format.

MediStreams has created a unique set of tools allowing providers to easily post healthcare payments regardless of format received.

The robust web portal provides for easy retrieval of images, data and reports to speed up denial management, secondary billing, follow-up activities, and improve collections. The Medical Lockbox is bank agnostic. The provider can maintain their existing banking relationship with funds deposited to the bank of their choice.

All mail is opened, sorted, organized and scanned

A daily report of deposits, including the total deposit amount, the check and payer information for each transaction

Payment, check and EOB images for each transaction is accessible on the MediStreams web portal

The data can be searched based on deposit date, check number, payment, patient name or account number as well as any other data element on the EOB or check
